Today we succesfully installed some desktops at a secondary school in Waterloo.

The Athenee Royal de Waterloo asked us to help them modernize some of their language classrooms to help teachers monitor the inclass dialogues better. We immedialtly went to work and found the right computers for their budget. After this we started to prepare the desktops with monitoring software, VoIP software, McAfee antivirus and we installed a webfilter on their network so the attention of the students will be on the lesson and not on a video game or Netflix.

Do you have a project that you wanna realise at your school?
Don't hesitate and contact us!
Our company specializes in the realization of technological modernizations in the classroom, we will help you find the right hardware and software for your school.
